Carbon Cycle Feedbacks Across Time Scales			
Phoebe	Chan	The impact of warming and acidification on wild-collected subarctic crustose coralline algae	001
Jung-eun	Choi	A high-resolution Paleocene-Eocene Thermal Maximum represented by high-resolution climate model	002
Kristin	Doering	Linking changes in siliceous primary productivity in the Labrador Sea to ocean-atmosphere climate dynamics during the Holocene	003
Esteban	Fernández	The potential role of nitrous oxide in ancient global warming events	004
Hubertus	Fischer	Beyond EPICA - Oldest Ice: The European effort to drill a 1.5 Myr old ice core in East Antarctica	005
Xuan	Ji	Deep Atlantic's Role in Atmospheric CO ₂ Decline during Last Glacial Inception	006
Gabriella	Kitch	Calcium isotope composition of Morozovella Velascoensis over the Paleocene Eocene Thermal Maximum	007
Wolfgang	Kuhnt	Climate-carbon cycle feedbacks during Cretaceous Oceanic Anoxic Events and Neogene warming episodes	008
Rocio	Lozano-luz	The Tore Seamount sediment trap in the North Atlantic Ocean: sea surface temperature (SST) and oceanic productivity variations during the last 21 kyr	009
Osamu	Seki	Reconstruction of atmospheric CO ₂ concentration during the Plio-Pleistocene	010
Amv	Sparks	Atlantic Ocean Productivity Change Across the Eocene-Oligocene Transition	011
Stefano	Torricelli	Distribution of benthic foraminifera at the fronts of freshwater glaciers in fjords and in open marine environment of Svalbard: implications for paleoceanographic reconstructions.	012
Plan	Vervoort	Quantifying the importance of carbon-climate feedbacks in response to astronomical forcing	013
Jimin	Yu	More efficient North Atlantic carbon pump during the Last Glacial Maximum	014
Geobiology: New Frontiers in Paleogeography Linking Paleoclimatic Changes with Biobio and Evolution			
Stella	Alexandroff	Hydrographic and climate variability at St Kilda, Scotland, since the late 19th century	015
Ilham	Bouimetarhan	Indian Summer Monsoon variability and impacts during the mid- Pleistocene transition: land-ocean evidence from the northern Bay of Bengal.	016
Erica	Crouch	Climatic and biotic changes during the Early Eocene Climatic Optimum (EECO) in the Canterbury Basin, New Zealand	017
Elizabeth	Dowling	The Early Devonian palaeogeography of Eastern Australasia	018
Dierk	Hebbeln	Key Environmental Drivers for Cold-water Coral Growth	019
Lorna	Keams	The descent to less even and less rich planktic foraminifera communities from the MECO to the EOT.	020
Agnieszka	Kuljawa	Distribution of benthic foraminifera at the fronts of freshwater glaciers in fjords and in open marine environment of Svalbard: implications for paleoceanographic reconstructions.	021
Briony	Mamo	Benthic shifts in the Cenozoic: preliminary results tracking Atlantic microfossil communities through a changing ocean	022
Mardi	McNeil	A 5.000 year record of Holocene nitrate source to the Great Barrier Reef lagoon, using the isotopic composition of calcareous macroalgae Halimeda	023
Carles	Pelejero	A 1-million-year record of environmental change in the central Mediterranean Sea from organic molecular proxies	024
Kelsey	Sarborn	Insights into the Holocene initiation of the Great Barrier Reef: The controls on reef development during a period of rapid sea-level rise and environmental change	025
Jaroslav	Tyska	Changing the biomineralization paradigm: Extracellular foraminiferal shells are controlled by dynamic subcellular structures	026
Jens	Zinke	Northern Boreo corals record ENSO droughts and increased sediment discharge since 1982	027
Ice Sheet/Ocean Interactions: Drivers and Impacts			
Peter	Bill	Episodic surface-water freshening in the sw Atlantic Sub-Antarctic zone during the early Oligocene: evidence for iceberg discharge?	028
Johan	Etournéau	Ocean temperature impact on ice shelf and glaciers around the Antarctic Peninsula during the Holocene	029
Edward	Gasson	Evidence and significance of Arctic ice shelves during glacial maxima	030
Michelle	Guldard	Holocene ocean thermal forcing of an East Antarctic outlet glacier: Geochemical and sedimentologic evidence for ice-ocean interactions in Sverner Channel, Prydz Bay	031
David	Hodell	The case for future IODP Drilling of the "Shackleton sites" on the SW Iberian Margin	032
Jacob	Jones	Reconstructing Southern Ocean Sea-Ice Coverage Over the Past 130,000 Years	034
Caroline	Lear	Oligocene-Miocene Climate Dynamics: Ice volume, ocean circulation, and carbon cycle insights from Atlantic foraminiferal trace metal records	035
Cait	Livsey	Oxygen isotopic composition of Lake Agassiz-derived meltwater draining into the Arctic Ocean from Neogloboquadra pachyderma shell geochemistry	036
Elaine	Mawbey	Foraminiferal geochemical proxy records from Amundsen Sea Embayment sediment cores spanning the last 18,000 years	037
Robert	Mckay	Ross Sea West Antarctic Ice Sheet History in the Late Cenozoic: initial sediment core results from IODP Expedition 374	038
Howie	Scher	The evolution of ice-sheets in the late Eocene: reconstructions from coupled Hf-Nd isotopes in authigenic and lithogenic sediments	039
Tina	van De Fliedert	Tracing Unstable Marine-Based Sectors of the Antarctic Ice Sheet during Plio-Pleistocene Warm Times	040
Jens	Weiser	Holocene variability in Atlantic Water advection to the northern Labrador Sea	041
Indian Ocean and Climate System			
Jessica	Amies	Quantification of African monsoon runoff during last interglacial sapropel S5	042
Ariella	Arzey	Mid-Holocene climate dynamics on the Great Barrier Reef	043
Leyla	Bashirova	A decadal and centennial Holocene paleoenvironment variability east of the Reykjanes Ridge (North Atlantic): evidence from benthic and planktonic foraminifera	044
Natalie	Buris	What does a Pacific Meridional Overturning Circulation during the warm Pliocene mean for nutrients and carbon isotopes?	045
Honglin	Chen	Orbital-scale evolution of Indian summer monsoon since 1.2 Ma: Evidence from clay mineral and geochemical records from the eastern Arabian Sea	046
Margot	Cramwinckel	Warm, fresh and variable conditions in the middle Eocene Labrador Sea	048
Maria	de la Fuente	TRACING MEDITERRANEAN OUTFLOW WATER USING COLD-WATER CORALS OVER THE LAST DEGLACIATION	049
Kristine	DeLong	Tropical Atlantic Warm Pool Sea Surface Temperature Variability During the Last Interglacial: A Comparison of Coral-Based Reconstructions and Climate Models	050
Anna Jov	Oruy	The climatic heartbeat of the late Miocene – new insights from deep-sea benthic foraminiferal stable isotope stacks	051
Naiima	El Hassan	Bottom water temperature reconstruction and its relation to millennial-scale climate changes in the western Svalbard margin through the study of benthic foraminifera since MIS 5/4 transition	052
Bethany	Ellis	An extended record of Indian Ocean Dipole variability from Indonesian Corals	053
Oliver	Esper	Revisiting the opal belt: the circum-Antarctic distribution of biogenic opal accumulation and lessons for paleoceanography	054
Alan	Foreman	Foraminifera-bound nitrogen isotopic constraints on Agulhas leakage	055
Joost	Frieling	Core-top calibration and first application of the dinoflagellate cyst based pCO ₂ barometer	056
Ryan	Glaukbe	Millennial-Scale Variations in ENSO Activity across the Last Deglaciation: Insights from Individual Foraminiferal Analysis	057
Kumar	Hannah	Sediment Provenance Changes in the North Atlantic Associated with Heinrich Events and the Last Deglaciation	058
Nicholas	Hitt	Decadal and millennial oceanographic change in the southwest Pacific gyre observed in deep-sea black corals	059
David	Hutchinson	Arctic closure as a trigger for Atlantic overturning at the Eocene-Oligocene Transition	060
Maria	Jaime Segui	Contribution of the northern-sourced waters to the deep eastern equatorial Atlantic across the Mid-Pleistocene Transition: a multiproxy approach	061
Lukas	Jonkers	MARGO 2.0: a new reconstruction of last glacial maximum ocean temperatures based on planktonic foraminifera assemblages	062
Lauren	Klipo	Investigating climate-related changes in deep water export from the Arctic Ocean: the search for the "missing sink" of protactinium-231	063
Liubov	Kuleshova	A high-resolution study of Holocene paleoceanographic changes in the eastern North Atlantic	064
Sandrine	Le Houedec	High resolution deep-sea ecosystem variability of the Nile prodelta during the past 20 Ka revealed by Benthic Foraminifera	065
Chen	Li	Upper-water structure regulated nitrogen fixation changes in the South China Sea during the last two glacial cycles	066
Fenghao	Liu	Evidence of methane emissions from the northern South China Sea during the Oligocene	067
Dan	Lunt	DeepMIP: Model data comparisons for the early Eocene climatic optimum and PETM: early results.	068
Nick	McCave	Glacial to recent changes in North Atlantic high-latitude upper ocean currents	069
Denvla	Meegann Kumar	Insights to the glacial-interglacial variability of the North American monsoon from vertical and spatial temperature gradients in the Gulf of California and leaf wax δD	070
Lise	Missián	Sedimentary δ ² H increase during Heinrich events: circulation or particle-driven signal?	071
Eva	Moreno	Temporal evolution of the coastal upwelling in the eastern boundary currents from the Pacific and Atlantic oceans since the 18th century	072
Qingyun	Nan	Mooson Variations And Its Possible Societal Impacts: A High Resolution Late Holocene Record From The Yellow Sea	073
Christelle	Not	Paleotemperature of the Canadian Atlantic Shelf intermediate water as a proxy for the Atlantic Meridional Overturning Circulation	074
Laura	Perez	Late Holocene climatic oscillation cycles modulating the hydrological changes within the inner Uruguayan continental shelf: an approach using XRF elemental ratios and diatom analyses	075
Frerk	Pöppelmeier	Water mass stratification of the mid-depth Southwest Atlantic during the past 25,000 years	076
Marci	Robinson	Indian Monsoon Intensity during the Late Pliocene	077
Teresa	Rodrigues	Past Interglacials Climate Variability: Features and lessons from "Warm Worlds"	078
Gavin	Schmidt	Anthropocene perspectives on abrupt events in the ocean sediment record	079
Jiangnan	Shi	Indo-Pacific Warm Pool surface water exchanges and its role for Pliocene climate dynamics	080
Marlett	Simon	Ocean dynamics key for abrupt sea-ice changes during Dansgaard-Oeschger cycles	081
Raidi	Tapia	Thermocline fluctuations in the central South Pacific during the past 500 ka	082
Natalie	Umline	South Atlantic circulation and subsurface warming during the last 60,000 years	083
Caroline	Van Der Weijst	Do Available Proxies Allow for Reliable Reconstructions of Warm Miocene and Pliocene Tropical Ocean Temperatures?	084
Yue	Wang	Upper ocean heat content (OHC) changes in the tropical Pacific induced by orbital insolation and greenhouse gases (GHG)	085
Thomas	Williams	A neodymium isotope record of Circumpolar Deep Water paleocirculation in the Indian sector of the Southern Ocean across the last glacial cycle	086
Qian	Xu	Excess 230Th and 231Pa records from Arctic Ocean Sediments: Implications for Chronology and Sedimentation	087
Fuchang	Zhong	Paleoceanographic changes and intraorbital differences in the Central Yellow Sea Mud area during the Holocene, based on quantitative analysis of benthic foraminifera	088
Climate Development and Biogeography			
Carin	Andersson Dahl	Depth-dependent environmental factors control Arctic Icelandica shell growth variability	089
Rose	Berdin	Reconstructing seasonal and inter-annual climate variability in eastern Philippines using geochemistry of Porites corals	090
Inda	Brenkman	Mn/Ca in benthic foraminifera as a proxy for seasonal hypoxia: Insights from microanalysis approaches	091
Giuseppe	Cortese	Radiolarians as proxies: an integrated approach to improve their use in paleoceanography studies in the South Pacific, South Indian, and Southern Oceans	092
Thibault	de Garidel-Thoron	Microfossil Sorter (MISO): An automated system for recognition and picking of foraminifera using convolutional neural networks	093
Zeynep	Erdem	Reconstructing late Pleistocene-Holocene sea surface temperatures using the Long Chain Diol Index (LDI)	094
Juan	He	Discrepant hydrogen and oxygen seawater isotope records in the northern South China Sea	095
Iván	Hernández-Almeida	A new radiolarian transfer function for the Pacific ocean: Assessing potential, limitations and application to the fossil record.	096
Chris	Hollis	Sea surface temperature in the early Paleogene SW Pacific	097
Guodong	Jia	Cyclisation degree of tetramethylated GDGTs in marine environments and its implication for source identification	098
Martin	Koelling	XRF(Scanning) data of the Lomonosov Ridge Core PS2185-1 S1, Arctic Ocean - Glacial Changes	099
Thomas	Leufter	Southern Ocean Cooling during the Middle Miocene Climate Transition Revisited	100
Dhong II	Lim	Sedimentary record of submarine volcanism in the Central Indian Ocean Ridge and its linkage to the climate change	101
Hui-Ling	Lin	Seasonal Distribution of Modern Planktonic Foraminifera in the South China Sea: Observation from Plankton Tows and Sediment Traps	102
Ariadna	Martinez Dios	Outcomes of a long-term experiment with live specimens of Desmophyllum dianthus cold-water corals for proxy calibrations and first paleo-reconstructions in the Mediterranean Sea	103
Fatin Izzati	Minhat	Development of foraminifera-based transfer function in Sunda Shelf: implication from shallow tropical sea.	104
Mudit	Murarka	An Exploration of the Aragonitic Skeletons of Deep-Sea Scleractinian Corals as Archives of Oceanic Rare Earth Element Abundances via Laser Ablation Inductively Coupled Plasma Mass Spectrometry	105
Akira	Oka	Simulation of global distribution of 231Pa and 230Th and its ratio in the ocean sediment by using an ocean general circulation model	106
Patrick	Rafter	Testing the bulk sediment nitrogen (N) isotope proxy with foram-bound N isotopes along the equatorial Pacific	107
Laura	Rodriguez-sanz	Foraminifera-based temperature reconstruction from the Mediterranean Sea across termination II using clumped isotopes and Mg/Ca proxies	108
Aleksey	Sadekov	Origin of Rare Earth Elements in planktonic foraminifera shells from deep sea sediments	109
Howard	Spero	Solving the planktic foraminifera carbon isotope conundrum for paleoceanographic applications	110
Chris	Turney	A global reconstruction of sea surface temperatures for the Last Interglacial (129-116 kyr)	111
In Kwon	Um	XRF core scanning as tool to identify for drilling cuttings on the seafloor sediments in the Ulleung Basin, East Sea	112
Gregory	Webb	Water quality proxies for deglacial Tahiti: more questions than answers?	113
Yang	Yu	Evaluation of coral Ba/Ca, Ba isotopes and rare earth elements as proxies for terrestrial input: New data from the Andaman Islands	114
Liping	Zhou	Provenance fingerprinting with luminescence properties of silty quartz and feldspars in deep-sea sediments from the Bengal Fan	115
Role of Southern Hemispheric Processes			
Harris	Anderson	Southern Ocean Response to Millennial-Scale Climate Change during MIS 3	116
Eva	Calvo	Phytoplankton response to increased dust and movement of the Subtropical Front	117
Chris	Chapman	The potential of Solomon Island coral Sr/Ca and δ ¹⁸ O to record Southwest Pacific climate	118
Robyn	Granger	Foraminifera-bound nitrogen isotopes in the southeast Atlantic Ocean: implications for past Indian-Atlantic exchange	119
Junichiro	Kuroda	Stratigraphy of the Cretaceous/Paleogene boundary interval at the Lord Howe Rise, southern Pacific	120
Gagan	Mandal	Coherent response from the last deglacial Southern Ocean upwelling to the transport of Subantarctic Mode, Antarctic Intermediate waters and subsequent east equatorial paleoproductivity.	121
Simone	Moretti	Foraminifera-bound nitrogen isotope perspective on the Eocene-Oligocene transition in the Southern Ocean	122
Alex	Reis	Constraining Carbonate Recrystallization on the East Tasman Plateau with Calcium and Sulfur Stable Isotopes	123
Henrik	Sadatzki	Southern Ocean sea ice evolution off East Antarctica during the last deglacial	124
Isabel	Saermilch	Modelling with high-resolution bathymetry demonstrates tectonic gateway induced cooling of Antarctica	125
Zheng	Tang	2-step enhanced deep Southern Ocean ventilation during Heinrich stadial 1	126
Natalia	Vazquez Riveiros	Water mass variations in the Mozambique Channel during the last 1 Myr	127
Nicky	Wright	Did solar forcing influence the Southern Annular Mode over the Last Millennium?	128
